

Conceptual View of Proposed Action

Existing

Proposed

What's happening at Port Townsend?

The Port Townsend Ferry Terminal Preservation and Improvement Project will replace aging terminal structures, create additional vehicle holding and accommodate future growth.

- In Fall 2005, WSF identified a proposed design for the Port Townsend Ferry Terminal. The design:
 - Extends the dock 180 feet in order to create more vehicle holding
 - Relocates Rotary Park
 - Improves vehicle processing and operational efficiency
 - Creates a remote holding area along SR 20 so waiting vehicles do not block traffic during peak times
- All vessel options being analyzed at Keystone can be accommodated in the proposed action for Port Townsend.
- WSF is conducting an environmental review of the proposed action. Results of the studies will be shared at a public open house in Summer 2006.
